Functional Requirements of Specification

There is a vehicle tracking system of Siskon. Siskon observes own vehicles so, want to know what cars they have and where the cars. They need to know list of vehicles. Vehicle information can be views via the internet or specialized software. I have a simple project that will develop vehicles record are kept and weather vehicle is active.

Task List

1. System analyzing and designing
2. Defining models and creating classes with code first approach
3. Automated test case that defines a desired improvement
4. Refactoring and coding.
